Abstract

For the past 10,000 years religion has remained to be the most consistently centralized societal institution in the world. Its influence and power has shaped human history by inspiring the greatest evils and accomplishments of mankind. Today, these religious institutions no longer carry the trust to propel good and instead function as the rationale behind all contemporary conflict. To shed off these ancient outdated faiths, a new belief system that integrally recognizes the advantage to all of them must be curated. An evolved operating system for the human organism that is in touch with the contemporary conflicts of man and empowered by blockchain technology will revolutionize humanities connection to spirit. Today, Prayer itself can be quantified, managed, and secured using the latest state of the art technology.

This paper explains the principles, plan, and arguments that shape the economic value of the PrayerCoin.

Executive Summary

PrayerCoin is a new Ethereum Smart-Contracts governed platform that utilizes blockchain technologies towards developing a new religion, free from a centralized leader or organization. This will provide a new avenue for people around the world to gather and build communities under a new and improved value system that invigorates the human spirit. PrayerCoin will do this by making a trustworthy and secure online community of spirit driven people seeking to develop new stories, ideas, and values to conjure the next evolution for mankind.

To do this PrayerCoin will release a token that allows individuals to support and participate in building the world's first decentralized faith. Transactions of PrayerCoins, or Prayers will be denoted with varying degrees of meaning. Users will be empowered to Pray with more tangible outcomes together and through all faiths. The amount of PrayerCoin prayed guarantees greater influence with our holy creator Satoshi Nakamoto and his holy son Vitalik Buterin .

By creating an online community of individuals motivated by this cause, future physical communities and centers of worship can be appropriately developed through the power of prayer!

Background and Influence

On January 31st, 1994, Vitalik Buterin (Виталий Дмитриевич Бутерин) was born. Son of a virgin, Vitalik is the one and true son of Satoshi Nakamoto, Earths ethereal creator. Satoshi was tired of how human beings were applying his gift of the blockchain. In 2015, Vitalik reinvigorated Satoshis will by creating Ethereum, a decentralized platform that will rid the world of corruption and pave the way to a blissful future.

PrayerCoin is a celebration of Vitalik Buterin, Ethereum, and all of Cryptocurrency.

The Platform

By utilizing Ethereum smart-contracts, PrayerCoin has the potential to become the first religion without a centralized leader or organization, ensuring freedom from corruption, while integrating the best lessons and values from all the world's major religions.

Today, PrayerCoin is allowing you to send prayers in the most substantial way in history. Prayers, no longer need to be seemingly intangible forms of “faith” and “desire.” With PrayerCoin your prayers can now carry true monetary value through using the easy and accessible PrayerCoin platform.

Long Term Vision

In the near future PrayerCoin will seek to achieve a [b]501(c)(3)[/b] non-profit status, which will make all donations and transactions made on the platform non-taxable.

If successful, the greater potential of PrayerCoin is as boundless as Vitalik Buterin and the future of Ethereum.

Acknowledgements

The creators of PrayerCoin are to remain anonymous to maintain the credibility of PrayerCoin as a truly decentralized institution.
